

WHY GROW NATIVES?

Natives will grow in Michigan's climate.

Natives are partial to Michigan soils.

Natives are drought tolerant.

Natives require little or no fertilizer.

Natives are resistant to many diseases & pests.

Natives attract hummingbirds, butterflies songbirds and beneficial insects.

Natives provide food sources for native wildlife.

Natives work to restore plant diversity.

Deep-rooted natives help stabilize and restore soil.

The deep root systems of most native plants help filter water and sequester carbon.

Therefore:

**NATIVES ARE GOOD FOR
YOU AND FOR YOUR YARD!**

Use Natives in Your Landscaping to

add color

add interest

attract butterflies and feed their larvae

attract and feed hummingbirds and birds

attract and feed mammals and turkeys.
